Another way to enhance the mood of your scene is to lighten a black-and-white background and add color to the foreground. I used the new options in the foreground ombre feature and added a soft grey to the background. As part of this effort, we are working with Adobe to swap some major core Photoshop tools, as well as some of the Bridge tools, to deliver a more customized experience. We are developing new features to bring dynamic smart assist in the form of image assistants to the desktop as well. Some of these features include common layer actions, live semantic search, and object rotation. 2. **Control the search experience inside Photoshop.** Current industry trends prioritize the intelligent sizing and placement of the content and content areas in multi-column and wider displays. Airspace is working closely with Photoshop product development to make image editing easier. This new experience is heavily influenced by mobile and tablet experiences that are optimized for a horizontal view. This includes intelligent grouping of layers, dynamic semantic object searching, dynamic filtration, and the ability to resize content to the intelligent aspect ratio of the display. This means less scrolling through layers and more ease of using Photoshop. 3. **Take the Workflow Offline.** While we're developing these new features, Adobe is also continuing the development of a new product roadmap. This new roadmap will include a number of exciting new features in Photoshop and other industry products that will be published in upcoming months. Airspace will continue to develop these features as they are released to ensure that even when you are not connected to the internet, you can still get the benefits of working in the cloud.

**Efficient Organization:** You can keep your files in order by grouping and creating folders as you wish. To do that, you can use the "Grouping" setting to group different files as you need. You can organize your files according to your needs. For example, you can group all the files according to the size or shape. Also, you can use the "Smart Guides" options to easily align the objects. This

function helps you in aligning your images. The **InDesign** experience is becoming even better—**InDesign** 2018 includes powerful new features for working with **API Digital Signatures** and **Cloud Formats**, building a stronger foundation for producing industry-leading PDFs. As well, new additions to **Web Design** offer an address-based design tool, contextual photo annotation, powerful page breaks and more. We're also excited about **Photoshop Touch** 3.0, a major update of the **Photoshop** Touch experience. The new app is now in public beta, allowing us to continue our work with the community to iron out more of the gaps and improve the overall experience. We'll be rolling out the new platform to more users as we fine-tune the app performance, stability, and design of the workflow. Another new feature of Photoshop is the Content-Aware Patch tool. The Content-Aware Patch tool updates your unique content, turning it into more accurate and natural in the context of the surrounding area. With the Content-Aware Patch tool, you can work on the entire image at once to edit all areas of your image without the need to set each area individually. You can find more information on the content aware patch in [Using the Content-Aware Patch tool](#).
